Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

DISBASE: Defects in DRPLA are the cause of dentatorubral-
DISBASE: Defects in DRPLA) [MIM.125370], an autosomal dominant
pallidoluysian arrophy (DRPLA) [MIM.125370], an autosomal dominant
neurodegenerative disorder characterized by a loss of neurons in
the dentate nucleus, rubrum, glogus pallidus and Luys' body.
Clinical features are myoclonus epilepsy, dementia, and cerebellar
ataxia. Onset of the disease occurs usually in the second decade
of life and death in the fourth.
CAUTION: Ref.2 sequence differs from that shown due to several
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        POLYMORPHISM: The poly-Gln region of DRPLA is highly polymorphic (7 to 23 repeats) in the normal population and is expanded to about 49-75 repeats in DRPLA patients. Longer expansions result in earlier onset and more severe clinical manifestations of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SEQUENCE OF 1-76 FROM N.A.

XIV. The complete sequences of 100 new cDNA clones from brain which code
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Genomics 59:339-341(1999).

-!- FUNCTION: Mediates the transcriptional repression activity of inclear receptors by promoting chromatin condensation, thus preventing access of the basal transcription.

-!- SUBUNIT: Interacts with HDAC7 (By similarity). Forms a large
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TISSUE=Fetal brain;

          HDACI and HDAC2. This complex associates with the thyroid (TR) and the retinoid acid receptors (RAR) in the absence of ligand. SUBCELLULAR LOCATION: Nuclear (By similarity).

DOWAIN: The N-terminal region contains repression functions that are divided into three independant repression domains (RD1, RD2 and RD3). The C-terminal region contains the nuclear receptorinteracting domains that are divided in two separate interaction domains (ID1 and ID2).

DOMAIN: The two interaction domains (ID) contain a conserved
corepressor complex that contains SIN3A/B and histone deacetylases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     738 PENATSRGNTEPAVELEPTTETAPSTSPSLAVP-----STKPAEDESVETQVN

   The present sequence represents a numan tance tell present sequence represents a numan tance tell present sequence. The representation and/or modulate cellular differentiation and/or modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular interactions, and cell trafficking and/or migration, modulate cell adhesion in proliferative disorders, such as cancer, modulate the proliferation, differentiation, and rentrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, pulmonary congestion or oedema, emphysema, chronic bronchitis, bronchial asthma and bronchiectasis, intestinal disorders because such as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cardiovascular disorders such as ischemic heart diseases would be used to treat disorders associated diseases or cerebral oedema, hydrocephalus, brain herniations, iatrogenic disease, inflammations, bacterial and viral meningitis, Alzheimer's blassas, cerebral toxoplasmosis, Parkinson's disease, multiple sclerosis, is and carcers, hydrocephalus and encephalitis, and treat hepatic

The present invention relates to methods of detecting a prostate cancer-associated transcript in a cell from a patient. The method comprises contacting a biological sample from the patient with prostate cancer-associated polymucleotides (designated PC genes) that selectively hybridise to a sequence that is at least 80% identical to them. The prostate cancer-associated polynucleotide sequences are differentially expressed in prostate tumour tissue or in prostate cancer and are derived from the tissues of various organisms such as humans or other mammals (e.g. mice, sheep and dogs). The methods of the invention are useful for diagnosing and treating prostate cancer in mammals. The prostate cancer associated genes are incit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 MAELEFVQIIIIVVVMMVWVVVITCLLSHYKLSARSFISRHSQGRRREDALSSEGCLWPS

diagnosing, treating or preventing autoimmune/inflammatory disorders (e.g. AIDS), neurological disorders (e.g. Alzheimer's), or cell proliferations or cancers New human secretory proteins and polynucleotides, useful for

Claim 27; SEQ ID NO 844; 458pp + Sequence Listing; English.

The invention relates to a secretory polynucleotide (designated sptm)

comprising any of 567 polynucleotide sequences (ABZ35837-ABZ36403), a

meturally occurring polynucleotide sequence at least 90 % identical to

the polynucleotide sequence, a polynucleotide complementary to them or an

ENA equivalent of them. The polypeptide or polynucleotide are useful for

treating, preventing or diagnosing a disease or condition associated with

the expression of functional SPTM. These are particularly useful for

diagnosing, treating or preventing autoimmune/inflammatory disorders

(e.g. acquired immunodeficiency syndrome, anaemia, asthma or Crohn's

disease), neurological disorders (e.g. epilepsy, Huntington's disease,

dementia, stroke, Alzheimer's disease, Creutzfeldt-Jakob disease,

multiple sclerosis, crebral palsy, Parkinson's disease,

multiple sclerosis, crebral palsy, Parkinson's disease,

schizophrenia or amnesia), or cell proliferative disorders (e.g.

psoriasis, polycythemia vera, or call proliding adenocarcinoma,

leukaemia, lymphoma, melanoma, myeloma, sarcoma or cancers of the brain,

```
AAB18461-63 represent human TANGO 261 proteins. The specification also describes TANGO 266, TANGO 216, TANGO 262, and TANGO 267. The TANGO polypeptides can be used to modulate cellular adhesion, modulate cellular differentiation and/or modulate cellular adhesion. The proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular adhesion, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, and hematopoietic associated diseases and disorders, atelectasis, pulmonary congestion or oedema, emphysema, chronic bonchitis, bronchial asthma and bronchisctasis, intestinal disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as the example of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       treat disorders associated with the ovaries, and mercal ordena, bydrocephalus, brain herniations, latrogenic disease, inflammations, bacterial and viral meningitis, Alzheimer's bisease, cerebral toxoplasmosis, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders.

note: the present sequence does not appear in the specification; it was

```
AAB18461-63 represent human TANGO 261 proteins. The specification also describes TANGO 267, TANGO 216, TANGO 267, TANGO 267, TANGO 267, TANGO 267, TANGO 267, TANGO 260 Polypeptides can be used to modulate cellular adhesion, modulate cellular adhesion. The pango proteins can be used to treat any von Willebrand factor-associated disorder, regulate extracellular matrix structuring, cellular adhesion, modulate cell adhesion in proliferation, modulate cellular interactions, modulate the proliferation, differentiation, and/or function of cells that appear in the bone marrow, and leukocytes, treat bone marrow, blood and hematopoietic associated diseases and disorders, atelectasis, pulmonary congestion or cedema, emphysema, chronic bronchitis, bronchial asthma and bronchiectasis, intestinal disorders, spleen associated diseases, modulate renal disorders, treat cardiovascular disorders such as ischemic heart disease, modulate the proliferation, differentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder. They may also be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         treat disorders associated with the ovaries, and cerebral oedema, hydrocephalus, brain herniations, iatrogenic disease, inflammations, bacterial and viral meningitis, Alzheimer's Disease, cerebral toxoplasmosis, Parkinson's disease, multiple sclerosis, brain cancers, hydrocephalus and encephalitis, and treat hepatic disorders.

note: the present sequence does not appear in the specification; it was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel human and murine secreted proteins designated TANGO 216, 261, 262, 266 and 267 useful as modulating agents of cellular processes, e.g. for treating cancer -

The specification also describes TANGO 266, TANGO 216, TANGO 262, and TANGO 267. The TANGO 2010 polypeptides can be used to modulate cellular proliferation, modulate cellular defesion. The TANGO 216 cellular differentiation and/or modulate cellular adhesion. The disorder; regulate extracellular matrix structuring, cellular adhesion, and cell trafficking and/or migration, modulate cellular interactions, modulate cell adhesion in proliferative disorders, such as cancer, and bone matrow, and leukocytes, treat bone matrow, blood and hematopoietic associated diseases and disorders, atelectasis, that appear in the bone matrow, and leukocytes, treat bone matrow, blood and hematopoietic associated diseases and disorders, spleen associated and hematopoietic associated diseases and disorders, spleen associated as sthma and bronchiectasis, intestinal disorders, spleen associated as schemic heart disorders, treat cardiovascular disferentiation, and/or function of bone and cartilage cells and to treat bone and/or cartilage associated diseases or disorder, and cerebral oedema, hydrocephalus, brain herniations, latrogenic disease, inflammations, hydrocephalus, brain meningitis, Alzheimer's Disease, cerebral cancers, hydrocephalus and encephalitis, and treat hepatic disorders.

CC corribase and encephalitis, and treat hepatic disorders. It was
